EXPERIENCE

SkillCraft Technology, Mumbai — Data Science Intern

February 2026 - March 2026

Virtual Internship focused on applying data science and analytical techniques to solve real world problems. Worked on four distinct projects that covered the entire data analysis lifecycle. Since this was a fully virtual internship, I did all the tasks by myself.

EDUCATION

Abeda Inamdar Senior College, Pune — BCA (Science)

June 2023 - May 2026 | Graduated with an aggregate result of 60%

PROJECTS

World Population Analysis — https://github.com/Nefunq/SCT_DS1

Cleaned and merged World Bank data, created bar charts and histogram visualizations using Python. Applied logarithmic scaling and regional aggregation to analyze global population distribution.

Titanic Survival Analysis — https://github.com/Nefunq/SCT_DS2

Cleaned messy passenger data, imputed missing ages using class- and gender-based groupings. Created new features (family size, age groups) and built visualizations to analyze survival patterns by class, gender, and group size.

Bank Marketing Prediction — https://github.com/Nefunq/SCT_DS3

Built a decision tree classifier with Scikit-learn pipelines to predict term deposit subscriptions. Handled categorical features using ColumnTransformer, achieved ~89.5% accuracy, and gained hands-on experience with class imbalance and model interpretation.

UK Road Accident Analysis — https://github.com/Nefunq/SCT_DS4

Processed timestamp data to create hourly patterns, mapped accident hotspots with an interactive Folium map. Analyzed accident trends across weather, road surface, speed limits, and vehicle types, revealing key risk factors.

SplitWise Clone — <https://github.com/Nefunq/splitwise-clone>

Built a PHP + MySQL expense-sharing web app enabling users to create groups, add members, record equal-split bills, and view live net balances. Implemented transaction support to ensure consistent expense recording, computed precise per-person shares with round-off adjustment, and added settlement payments to track who owes whom.

VulnScan (Python Security Tool) — <https://github.com/Nefunq/VulnScan>

Developed a consolidated vulnerability scanner featuring Nmap port scanning, Shodan OS/CVE enrichment, error-based SQL Injection and real-time CVE lookup via Vulners API - cutting assessment time by consolidating five manual tools into one CLI.

SKILLS

Programming Languages:

Python | JavaScript | PHP | C

Programming | Java

Web Technologies:

HTML | CSS | JavaScript

Database Management:

SQL | Database Design | Query

Optimisation

Development Tools:

Git/GitHub | VS Code |

terminal/command line | Conda

Data Science & Machine Learning:

Pandas | NumPy | Matplotlib |

Seaborn | Folium | Scikit-learn |

Jupyter Notebook | Spyder

Core Concepts:

OOP | Data Structures | Algorithms

Mathematics:

Strong Quantitative and Analytical Skills

Languages (Fluent: written & spoken):

Hindi/English

Other:

Quick Learner (Can learn anything)

| attention to detail |

self-motivated

Certifications & Achievements:

(Currently Pursuing)

Python Certification

freeCodeCamp

RDBMS Certification

freeCodeCamp

JavaScript Certification

freeCodeCamp
